

PTP80 GrandMaster Clock

The PTP80 GrandMaster Clock generates and distributes precisely synchronised time across packet networks. It uses Precision Time Protocol (PTP) to IEEE-1588 v2 to distribute time to remote PTP clients and slaves over a network. Multiple PTP80 can be utilised for load sharing resilience and increased support.

Also available:
 PTP80 Elite
 PTP80 Elite-D
 PTP80 Elite-Q
 PTP80 Elite-S

Features

- Advanced hardware-generated timestamps
- Internal disciplined oscillator provides continued stability if synchronisation source interrupted
- Rubidium or Quartz Oscillators
- Multiple outputs include 1PPS & 10MHz, E1/T1 and IRIG-B
- OEM Board design also available providing Equipment Manufacturers with a fast track PTP implementation.

Input Synchronisation Options

- GPS
- GLONASS
- BEIDOU
- All via Active or Long Distance Antenna
- Multiple alternative inputs available

The PTP80 GrandMaster Clock incorporates hardware based time stamping, providing the highest level of timing and frequency over a broad range of wireline and wireless applications using Precision Time Protocol (PTP), described in the IEEE 1588-2008 version 2 standard.

Typical Applications Include:

- WiMAX
- Broadcasting (Synchronisation of DVB / DAB Transmitters)
- Power Utilities (Applications requiring Time of Day)
- Military Communications
- High Frequency Trading (HFT) in Financial Services
- Telecommunications:
 - LTE
 - Ethernet / IP Backhaul (Synchronisation of Base Stations)

Key Benefits

- Precise timing and synchronisation over packet-based networks
- Rapid migration to Ethernet / IP Backhaul in Mobile Networks
- Complete End to End PTP Solution with PTP8 Network Time Client
- Interoperability with 3rd Party PTP Clients
- Front panel has a large alphanumeric LCD, status indicator and 5-segment button for configuration.
- Comprehensive web browser for remote configuration and control.

PTP80 Specifications

PTP Function:

IEEE 1588 v2 compliant
Ethernet 10/100Base-T (1 x RJ45)
Unicast / Multicast Operation
One step /two step operation

PTP Performance

Support up to 50 PTP Clients @ 64 packets/s
80 PTP Clients @ 32 packets/s
128 PTP Clients @ 16 packets/s
Configurable to Acceptable Master Table for multiple units providing increased levels of Client support and load sharing resilience.

Synchronisation Source

C/A Code GPS Receiver (L1-1575MHz)
High Performance Antenna with 15m cable (50Ω BNC)
• Tracking: 12 parallel channels with TRAIM
• Acquisition time: Cold start <5 min. (typical)

Alternative Synchronisation Sources:

GLONASS
BEIDOU
10MHz / 1PPS input (BNC 50Ω)
Time of Day Serial Message RS232/RS422 (RJ45)

PTP80 Outputs

- **1PPS Output**
2.5Vpp +/- 0.1Vpp into a 50Ω load
Connector: BNC 50Ω
- **10MHz Output**
10MHz sinusoidal phase aligned +/- 100ns of 1PPS output
1Vrms into a 50Ω load
Connector: BNC 50Ω
- **E1/T1 Frequency Output**
Transmit bit rate: 2.048Mbps
Line encoding: HDB3
Connector: BNC 75 Ω unbalanced / RJ48, 120Ω option
T1 option available
- **Time of Day Serial Message RS232/RS422**
NMEA GPRMC message format
Baud rate and communication attributes user selectable
Connector: RJ45
- **NTP(V3rfc1305)**
RJ45 10/100Base-T (via DCN port)
Client system accuracy up to 1 millisecond
- **IRIG-B**
Range of selectable outputs including IEEE1344 extension
Connector: 50Ω BNC

Please consult factory for other available options

Timing / Frequency / Holdover Accuracy

1PPS accuracy - ±50ns peak to peak when locked to GPS, 30ns RMS
Timing accuracy using PTP - better than 1µs possible (network dependent)
Frequency accuracy using PTP - better than 10ppb possible (network dependent)
Holdover accuracy - see table below

| Oscillator | | Stability Per °C | Performance while disciplined | | | | | | Holdover Accuracy at constant temperature after loss of reference | | |
|------------|-------------|---------------------|-------------------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---|------------------------|------------------------|
| | | | Averaging Time | | | | | | Time | Frequency | |
| Option | Description | | 1s | 10s | 100s | 1000s | 10000s | 1day | 1day | 1day | 3days |
| 1 | OCXO | 1x10 ⁻¹¹ | 5x10 ⁻¹² | 3x10 ⁻¹² | 1x10 ⁻¹¹ | 1x10 ⁻¹¹ | 3x10 ⁻¹² | 1x10 ⁻¹² | <8 µs | 2x10 ⁻⁹ | <4x10 ⁻⁹ |
| 2 | Rubidium | 7x10 ⁻¹² | 3x10 ⁻¹¹ | 8x10 ⁻¹² | 3x10 ⁻¹² | 3x10 ⁻¹² | 2x10 ⁻¹² | 8x10 ⁻¹³ | <1 µs | <1.0x10 ⁻¹¹ | <1.5x10 ⁻¹¹ |

PTP80 Specifications

Management

Configurable via front panel display used with 5 Button Keypad

Remote management:

Web browser, accessible via 10/100Base-T, DCN port (RJ45)

SNMPv1 (RFC 1157)

SNMPv3 (RFC 2271) next release

Time & Frequency Solutions' Universal Clock Management System

Alarms

Alarms are notified via the following:

1. SNMP
2. Web Browser
3. Front panel display
4. Voltage Free Single Pole Changeover Relay

Security

Protection from unauthorised access available via System Administrator Password Protection

Product Standards/Compliance

Conforms to relevant sections of:

CE

RoHS

WEEE

EN61000

Consult factory with requirement for your country/application

Physical

Dimensions: 19" x 1U high x 200mm deep rack mount

Weight: 3kg typical, ETSI rack fixings

Option - OEM board designed to customer specification

Power

AC: 95- 264VAC 47 to 63Hz

DC: optional dual -48VDC input (-40 to -72VDC range)

Environmental

Operating Temperature: 0°C to +50°C (please contact factory for advice outside this range)

Storage Temperature: -5°C to +60°C

Humidity: up to 95% RH (non-condensing)
